T.LONCON, Printed y Ray in Lawer.

To the Right Honorable, Sir lames Pemberton Knight, L. Mayor of the Honorable Cittie of LONDON.

Thath bin, and is right Honorable) a lawdable Custome in this Cittie, that at the entring of any Lord Mayor into his office, not onely his family arfriends and acquaintance, but also of every Fraternitie, some selected men should present his L* with one guist or other: wherby they do not onely Cogratulate with him, his late increase of Honor;

but also those presents are as tokens, or earnest pence of their yeelding dutie and Obedience vnto his Lordship during his Office In like fort, I my felfe, though one of the poorest, yet a Cittizen, and none of the least in humble Obedience, and dutifull good meaning towardes your Honor being not furnished with any good thing worthy presenting at your Honors first entrance, am now imboldned towardes the expiration of your yeere, to prefent your Lordship with this booke intituled, A Rich Store-honse, or Treasurie for the Diseased, A booke Right Honorable] very necessarie & con unient to bevied of the poorer fort of people, for the preservation of health, that are not of abillitie to goe to the Philitions, and Lassuring my felfe, that your Lordship both hath and will youch afe to be a protector of the poore peoples profit and good, both in health & wealth the same coming by chaunce into my handes [& now want ng a Patron]haue thought it good to publish it vnder your H. na ne, whose Authoritie best may countenance the fa.ne, and whose courteous admittance shall be a sufficient guerdon of my dutifull good meaning herein, If my worth were greater, my duty should shew greater in the meane time,

as it is, it is boun to your Lordship, to whom I wish long life, still lengthened with all happines,

Your Lordships in all dutie, RALPH BLOVYER.

DIVERSANDSVDRY

good instructios & rules of knowledg, very meet & convenient to be known of all such as are the right Practifers of Phisick and Chirurgery: & also cocerning the maner & vse of bloud-letting and purging, and of the commoditie and discomoditie, that oftentimes springeth and commeth thereof.

OR ASMVCH as Health is profitable and pleasaunt to all men: fince that all men do continually wish & pray, eycher for the restitution, or cotinuance of the same: And also how that it is the property of Nature, onely to fight

and striue against and Diseases: and likewise, how that the Philition is but the Minister and servant of Nature: serving eyther to apply such thinges to her as may hee vsed to destroy the Disease withall: or else by taking away the greatest part of the same matter which causeth & mainteyneth the sickness: and therfore it is very meet & necessary, for every Philition that before such time as he do take vpon him to minister any thing at alto the sicke Person, dilligently to learne & persectly to search out, both

the Originall & principall cause of the Disease: in which, if hee be ignorant, then is it more by good Fortune, then by any Cunning or Skill, that hee doe euer cure any manner of Disease at all: for how is it possible to help nature, with that thing which the hath neede of, except it bee first of all knowne what shee needeth? which none can perfectly vnderstand or know except the chiefe cause of the difease be first manifestly known vnto him, insomuch that he may not minister things directly contrary to the cause of the same disease. And therfore I do greatly lament the ignorance of the comon fort of People, who (for the most part) are perswaded, that one Medicine is sufficient for one Difease, and not regarding that one disease may come of fundry causes: and therfore it doth necessaryly require diuers Medicines (as for example) Weakenes of the Stomacke (that it canot digest well, or that it hath no good apetite) is a disease which may come a dozen seuerall wayes at the least: Therefore the Cure of that disease, cannot alwayes bee cured with one onely Medicine. As also, if that Weakenes of the stomacke, doe come of a weake distemperature of it selfe onely, then it must of necessitie be made hot by one meanes or other. But if that heate be the cause of the weakenes thereof; then it must be cooled with some colde medicine that is meete for it; So that you must be fure alwayes, for to moysten drynes, & to dry vp moysture.

But if Weaknes doe come, of some supersuous humour that doth abounde, which hath slowed

into

in Philicke & Chirurgerie.

into the stomacke, or that bath bin there ingedred: then must that ill humour of necessitie bee purged out, eyther by a vomit : or elfe a Purgation, with a meeke medicine for it. And if that it happen to be a Fleagme : it must be holpen with such a medicine as vtterly expelleth Flegme . But if that Choller be abounding, then there must of necessitie beevsed, fuch a medicine as doth purge Choler . And likewife for Melancholines; a meet Purgation must be vsed to expell the humour thereof. But if that the Imbecillitie of the stomacke be caused by a Distillation and R hewme that falleth out of the head into it: then is the cure to be remedyed in the head, and not in the stomacke. Likewife, if the Distemperature of the Liver or Spleene, doe weaken the Stomacke: then the cure thereof, confifteth onely in the healing of those members, and not of the miniftringany thing for the stomacke at all.

Therefore let no man thinke it sufficient for the Phistion, if that he doe perfectly know that a man hath such a disease, as the Ague. the Collicke the Flux, or some other such like &c. that then hee may presently (if he be skilfull) minister a meet medicine for it. No, not so, but he must first search out by all meanes possible he may, the very cause it self of the disease. The which many ignorant people doe perswade them selues, that a Skilfull Phistion may doe in all Diseases, by the sight of the string onely. But alas, they are altogether deceived: and as for to come to the Knowledg of the cause of some inward diseases of the body, the string pro-

fireth

fiteth nothing at all. For in most inwarde discases of the Body, there ought as great a regarde to bee taken of the Dustes, and of the disposition & state of the braine of him that is sicke, as there should be had of the Vrin it selfe.

Also, the Egettions, Sweat, Spittle, and other excremets, are not to be neglected, infomuch that at some times, they do declare the cause of the Disease, the state thereof, when the Trum doth not shew any thing at all.

Likewise, for example in a plutisse, or an inflamation of the Lungs, or in a Squinancie, or such like, there is much more be known, by Spittle,

then there is by the drin.

Moreover, in a Laske, or in a bloudy flut, or in a Colick or Illiake, there is more certaintie of judgment to be given by Egettion or ozdure. then there is by them. Which thinges; those that are not altogether adicted to their owne fantalies may easily by good reaso be perswaded to credit it: for Vrin is nothing elfe, but only the Watery & wally part of the Bloud, for it is seperated fro the bloud in the Liver, & sucked from thence into the Beines, from whence it distilleth downe into the 25 labber, and foe paffeth foorth . Seeing therfore that Wain is the excrement that is seperated from the bloud; there is good cause why it should shew the state of the Liver, and also of the bloud in all parts of the body, & it can likewise declare the full flate of all the members which it paffeth by : as of the Beines, the Bladber, and fuch like.

But

in Phisicke & Chirurgerie.

But certainly, in other diseases that be out of the Meines, and be distant from the places by which the Urm paffeth. There is no certaine judgment to be given by the Utin, vnleffe the vehemencie of the difease have infected either the bloud or the Liverafter some fort: Yet neuerthelesse, such is the ignorance of many People, for that they thinke him wrothy of no estimation in the knowledg of philicke, that cannot at the first fight of the Witin, (although it hath bin carried 20. miles) tell whe ther it be the water of a Man or a Women, & how the disease grieueth the patient better then himfelfe, and whether he or the shall line or die, what disease soeuer it bee off which things (vndoubted-· ly) in diuers Diseases, are impossible to be knowne by the onely fight & inspection of the Titin.

Therefore it is very necessarie & fit for all those that will take vpon them to minister phistele (most duely and rightfully amongst other thinings) to observe well thiese 4. rules next following. (viz.)

To fee the ficke person, & to conterre with him of her (which soeuer it be) for there is none that can so well declare any griefe (whatsoeuer it be) as he himselfe can that is troubled or grieved therewith.

'2 To view & feele all the pulses of the ficke perfon and to observe well the state of them.

3 To view very dilligentlie all the excrements, not only the Urin, but also the Spettle, Sweat and of Dure.

4 And last of all, to have a respect to the place

where the griefe is and to consider wel all the accidents that doe arise thereof; not omitting to know the former diet and course of life, which the sicke

person hath vsed.

These thinges then being dilligently & seuerally noted, the Phisition may more certainely learne the chiefest cause of the disase, the strength thereof; and to what end it will come vnto, then hy seeing the Tatus onely, and also by what meanes he may minister a meete medicine for it, whereby the sicke person may soone sinde ease, and he purchase

vnto himselfe exceeding great fame.

Thus haue I partly declared, what things ought to bee knowne of euery Philition, that thereby he might withdraw & take away the fond and foolish opinion, that a great number of people doe deeme to be true, that is, that the light of the **Thine** is sufficient inough, for a cunning Philition, perfectly to know the disease of the sicke, and the true cause thereof, and to minister apt medicines for it. And now I cease to speake any more hereof, but I will as briefely as I may, entreat somewhat of the vie and benesit that doth arise and come, of **Bloubletting** and **Burging**, and I would wish all those that do practise the same, to be carefull thereof.

The

in Phisicke and Chisurgerie.

The vie of Bloud letting, and of the commodities thereof.

IRST it is to be noted that if the body of a man do abound with humours, which are ready to oppresse nature, then whether there be any sicknes in the body present, by meanes of them, or if there be but danger of sicknes, those humors must be euacuated out of the body, eyther by Bioud-letting, Purging, Tomit, Sweating, Baths, or else by some other kinde of euacuation. But I will speake here onely of euacuation by Bioud-letting and Purging, and first of all of Bloud-letting.

There be divers things to be considered of, before **Bloud-letting**, as the age of the patient, the Complexion, the time of the yeare, the Region the Custome, the strength, and the vehemencie of

the disease.

1 The age must be considered of, because children under 14. yeares of age, and aged persons may not be let bloud, unlesse great necessitie require it.

2 The Complexion is to be noted, because a hot

complexion hath large Veines, and aboundeth with much bould, and they may therefore forbeare a good quantitie of bloud: But colde complexions haue narrow Veines, and little bloud, and therefore their euacuation must be small.

3 The time of the yeare must be very well marked, that the weather be not too hot nor too cold, and therefore the spring time, is the most apt time for Bloud-letting because that then it is temperate.

4 The region and country is to be spoken of, because it is to be noted, that if the region be very hote, or else very colde, it is not good to let bloud, but a temperate Region is most meete of all for it.

5 Gustome is not to be neglected, for thereby we may know that they that have been accustomed to bleede, may better suffer Bloud-letting, then those that were never letten bloud at any time before.

6 The strength of the person must be regarded, for if there be great weakenes, then it is very dangerous to let bloud at all, except great necessitie compelleth.

7 Also the vehemencie of the disease is worthy to be marked: for if it be a vehement disease, then you must let bloud forthwith, if the former circum-

stances will permit it.

These thinges being considered, if they will permit Bloud-letting, and if it be in a needefull cause, then it shall be very necessary to know what signe the Moone is in, for you must take heede that shee be not in that signe that governeth that member,

where-

in Phisicke and Chirurgerie.

wherein you intend to open the Veine, and also to foresee that she be in such a signe, as is good to let bloud in.

For the vies and commodities of Bloud-letting, are against these diseases that are here expressed.

This is a generall rule, that Bloud-letting is a very good remedy for all diseases that be engendred of aboundance flowing of eruption of bloud,

as be chiefely the Feuers, called Sinochy.

a Alfo the Phrensie, Squinancie, Plurisie, Peripnewmony, Opthalmie, & against all inflamations,
and impostumations, engendred of bloud in the
Liner, the Spleene, the Reynes, the Wombe, the
Share, the Arme, holes, the Armes, the Legges:
and to conclude, in all inward and outward partes,
wheresoeuer the inflamation be: Bloud-letting is
good for it, whether it be now present, or that
there be any danger, that it will shortly ingender.

3 Also Bloud-letting is good in Feuers, whether they be continuall or intermittent, insomuch that the obstructions & stoppings of the Veines, be caused of immoderate repletion of the humors.

Note also that Bloud-letting doth emptie and exacuate from the body, all humours alike, as wel

the good as the bad.

And therefore it is chiefely to beevled, when there is too great an aboundance of bloud in the body and other humours y which doe ftraine the Veynes, and that there is great danger and leopardie in breaking of some Veine ion the brusing out of some sluxe of bloud, or of choaking, and to extinguish

extinguish natural heate. And therefore in such cases, you must let bloud with all speed, although

the sicknesse be not already present.

For by letting of bloud in due season, the superfluous fulnes of the Veines, is brought into a very meane estate againe, and the paines that came of the fulnes and stretching of the vessels, be eased: and the heavines that was selt in the body, is cleane taken away, and the body is lightned, and made more quicke and nimble, to doe all such actions as Nature hath ordained it to do.

Also it causeth nature to have a larger scope, and a free passage, by opening and emptying of the straight waise and passages of the Veines and

Arteries.

Last of all, if it bee done in time, it preuenteth divers and sundry diseases, into which the body

was both apt and ready to haue fallen.

Many more commodities might heere beerehearled as concerning Bloud-letting which is done
when necessitie requireth, and as it ought to bee
done; but to conclude (omitting all other) Note
this for a generall rule, that Bloud-letting is very
good against all kinde of diseases, which becaused
and engendered of bloud, and not onely when
the diseases are present, but also it is good letting
of bloud, to prouencany such diseases, if they bee
foreseen or stared, alwains regarding that there
be none of these impediments aforesaid, which do
prohibit and sorbid Bloud-letting, except it bee in
great necessitie and extremitio, for their as the com-

in Philicke & Chirargerie!

mon prouerbe is, Necessitas non babes legem, that

is : Necessitie hath no Lawe,

Here would I leave off to speake of Bloud-letting. but that there commeth into my mind, the common opinion of the ignorant people, which doe certainely believe, that if any person be let bloud one yeare, that he must likewise be let bloud enery yeare againe, or else hee is in (Icannot tell) how great daunger; which fond opinion of theirs (whencefocuer it fprung at the first) is no more like to be true, then I should fay, when a man hath a great wound by chaunce, in any part of his body, whereby he loofeth much bloud, and that after it is healed, hee must of necessitie have the like. wound againe the next yeare, to auoyde as much bloud, or else he is in daunger of great lickenesse or of death. Which opinion, if I my selfe did affirme it to be true, (although it be most falle) yet I might vie the like reason and authoritie to defend it that the common people do vse for theirs: for they can fay nothing, if they be asked why they doe thinke for but that they have heard many fay for Therefore I would wish that no man should credite any longer this fond and foolish opinion, being most falle, vnles he could shew good reason for it, which I am very well affored of, no man can down allow of Many this I thinke, that like is Blond-letting is

Many this I shinke, that like is Blond-letting is not good against all discuses, so also it is not good in all persons, but only in those that will be content to the afterward a moderate and convenient diet.

12 hase thereforecliat development in blond, and,

and cond bacteriotecture double of the motoriographic

will be let bloud to preserve them from the danger of any disease, which is like shortly to ensue and molest them: They must for a long time after, be content to vie a moderate & convenient diet. For those that be untemperate and gluttons in meates, or are great drunkards, and wine-bibbers, they do not onely receive no commoditie at all by Bloudletting: but also oftentimes they catch more hurt by it, then they should have had without it, for in three or foure daies space after, they fill and stuffe themselves with more raw juices and humours, (by meanes of unmeasurable dyet) then they had before, and oftentimes they doe die through convulsion.

And therefore note, that there is such force and vertue in a moderate dyet, to eschue and decline diseases, that without the due observation of it, Bloud-letting is of no purpose at all. And therefore if the common saying of the people be true in any body, that they must of necessitie bee let bloud often, it is very true, but it is in such as keepe an immoderate diet, presently after Bloud-letting, & therefore I doe advertise all men to beware of excesse in eating and drinking after Bloud-letting.

Note also, that after Bloud-letting none ought to walke very fast, or to runne, or to vse any vehement exercise, but let him be quiet & rest himselfe, vntill such time as his spirits shall be well restreshed

and quieted againe.

Note also, that no person being let bloud ought to sleepe immediatly after Bloud-letting, but let him

in Philicke & Chirurgerie.

ftim keepe himselfe both quiet and waking and auoyding all contention and exercise of body and minde, & about two hours after letting of bloud, there may a little foode be taken, but let it be such as will make good luice & nourish apace, and within foure or fine hours after Bloud-letting, or somewhat afore the patient may be permitted to sleepe, so that it be prouided for, and taken heede of, that he doe not turne himselfe vpon that arme, where the veine was opened, and let him also take good heede that he doe not loosen the band, and so let the bloud flow out againe, and let him afterwardes vse a sparing diet, dayly increasing it by little and little, vntill such time as he be come to his accustomed ordinarie dyet againe.

And note also, that the morning is the most meetest time of all for Bloud-letting, when every digestion is perfectly similared, and the superstuties & excrements of each of them fully anoyded out, which thinges of necessity must be fore-seene, that they be so. Or at the least in a time of great extremitie, the next apt time to let bloud it, is when the stomacke is somewhat empty, & that is about

fixe or eight houres after meare.

Thus much have I entreated of as concerning Bloud-letting, and now I am purpolely midded to Bloud-letting, and now I am purpolely midded to peake formed have of the view of the come of Purging and the content of the

humoure as it wereae to draw, it con-

The vie of Purging, and the benefit that oftentimes commeth thereof. on sobolishing

Orasmuch as it is very necessarie to be vnderstoode of all persons, that every kinde of Purgation, hath that fecret vertue and property in it felfe, that when it is received into a mans body, and prougked to exercise the vertue that it hath by naturall beate labouring to digest it, then doth it draw vnto it all fuch humours, as it hath vertueand power to purge.

And thereforea Purgation is an evacuation of vicious and corrupt humours, which doe oftentimes trouble and molest the body, but not of all

corrupt and bad bumours alike.

For enery Purging medicine, doth draw vato it selfe one peculiar and proper humour (that is) eyther flegme or choller, or effe melancholy or wa-

try humours

And therefore those persons that be parsally in health, ought not to take a Purgation fance they doe not abound with corrupt humours, wherefore in those, when the medicine findeth no such super-Subs humours as it hath vertue to draw, it confumeth

in Philicke and Chirurgerie.

fumeth and wastern the bloud and the stell: and for that cause whole solkes are not to be purged by Purgations, but rather consounded and wasted: for it is manifest hereby, that Purgations be very dangerous to them that are in perfect health, which thing is testified also of Hipocrates in the 37. Aphorisme of his second booke, where he saith after this sort, One corpore bene se babent hos purgare periculosum est, that is, tis dangerous purging of those

that be in perfect health.

Also because every purging medicine hath vertue to drawe one peculiar humour, there is good heed and care to be taken, that such a medicine be ministred as hath vertue to draw out the humour abounding and move other, or else instead of much good that of itselfe it would doe, if it were conveniently ministred; it may contrariwise doe exceeding great hurt, and worke many inconveniences to the body. And according to the saying of Hipocrates in the last Aphorisme of his first booke in this maner: Si qualia oporter pargari purgentar confert, of facile fermat, difficulture, that is all such things be purged as ought to be, it profiteth, and may vasily be suffered, but if the contrariwise; it hurterts, and may scarcely be borne.

Therefore ought diligent care and heede to be taken in the receiving of a Purgation, that it bee ministred by a skilful Philition, that hath certainly found out what humorit is that abounderh.

But alas the greatest number of the common fort of people udow hold an opinion, that if they may anibused haue

Inftructions to be oble wed

have a medicine for alittle inoney, which will prouoke them often to the stoole, what humor soener
it be, and purgeth out, they perfuade themselves
that they are safe enough: howbeit, I would wish
them hereaster alwaies to have in minde this saying of the most excellent Philition Hipocrates in
the three and thirty Aphorisine of the first booke,
Desectiones non multitudine sunt estimanda, sed statia desiciantur qualia connenium, that is: Egestions are not
to be esteemed for their great quantity; but is such
humours be purged our as they ought to be (that
is) such vicious and corrupt humors as do abound
and be supersuous in mans body, then is the body
quieted for a long time after, if it be dieted as afore
said.

There are divers things chiefly to be considered of by every Phisition, before such time as hee doe minister any Purgation to the sicke persons: as the quality & quantity of the humor, the strength of him or her that is sicke, the age, the time of the

yeere; and lastly, the disease.

First, the qualitie of the humor is greatly to be considered also, that thereby her may perfectly know what kind of humor is to be evacuated and purged out, for it must be onely that which troubleth the body, with superfluous aboundance thereof it, noting and no manufactured and minimum and it.

eft and trouble the body, then he must of neeeffisie ministern medicine which purgeth slegme, and se likewise for all other humors what focuses a bounding

in Phisicke & Chirurgerie.

bounding in any part of the bodie.

Thirdly also he that doth undertake the minifiring of any medicine, ought to have great respect to the strength of the sicke or diseased person: for if he be very weake and feeble, there ought no Purgation at all to be ministred unto him, because all manner of Purgations doe both weaken nature & diminish strength; and the stronger the sicke person is, the more he is weakened thereby.

Fourthly let all men theretore beware of vehement and strong Purgations, least they put their lives in hazard and daunger. Therefore by the age of the Patient, the Phistion is put in minde, that children and olde men ought not to receive any Purgation, except maruellous great necessities

doe require it.

6-

br

ng

Fiftly the time of the yeare is not to be neglected for there be some times of the yeare where in Purgations ought not to be ministred, as in Sommer, & especially during the time of the Dog-daies, as they are most commonly called and also during all the time that the Sunne is in Leo, for then is nature burnt vp, and made so weake withall, that shee is notable to suffer the force and violence of a Purgation, but the Spring time is the most meetest & principallest time in the yeare, for the taking of Purgations, because it is then temperate. Last of all, the Phisition ought diligently to behold and contemplate the disease, that he knowing certainely what kinde of disease it is the may the better sinde out of what humor it is caused. As for example,

If

If the Philition doe perceiue the disease to be a tercian Feuer, straight-whay he knoweth that it is caused of great aboundance of Choller, and therefore he must of necessitie minister a meete medicine to purge Choller withall, & so likewise in all other diseases.

Note likewise, that if there be none of the impediments about named, a Purgation is good to be ministred to all such as haut aboundance of euill inice or corrupt humors in the body, for it draweth out all the bad humours that doe molest the body, and thereby doth restore it to his owne estate againe.

But if a Purgation be ministred eyther to one that needeth it not, or at any inconvenient time; or that it be such a medicine, as draweth, not out the humour which then aboundeth for if the medicine bee vehement & very strong, it will surely put the Patient in great daunger of his life.

Thiefe things therefore ought to be well taken heede of by all men, least they catch great hurt;

when they hope for most profit.

But if a Purgation be discreetly ministred to him that hath neede of it in due time, and by an apt & meete medicine, which is of that force and abilitie, to draw out the abounding humours in sufficient quantitie: then doth the medicine purchase most singular great commodities vnto the body, for it enacuateth and emptieth out all the chiefest causes of the discass and sicknesses, eyther present or else to come, being ingendred of any superfluous or corupt humour, as are commonly Feners. Tertians

in Phisicke & Chirurgerie.

Quartaine, quotidian, or Fluxes, and are caused of raw humours or sharpe choller, Dropfies, Gowtes, Paulfies,

Litargies, and divers others, &c.

Note also, that before a Purgation be ministred, there ought a medicine to be taken, which should prepare the body, and make it apt to purge, and therefore it is called a preparatiue: it is given for two causes, either to divide, extenuate, and make them grosse and clammic humors that they may be ready to flow out, when the medicine draweth them, or else it is given to open & vnstop the cunduits and vessels of the body, by which the Purgation must draw the superfluous hymours to it.

And this is that which Hypocrates doth counfaile in the first Aphorisme of his second book, where he saith, Corpora cum quisque purgare voluerit, opportet sunia facere, that is, when any man will purge the body, he must make it flowing, by opening and

vn-opening of the vessels.

The most meetest time of all to receive a Purgation is in the morning, for then are all the digestions perfectly finished, and the stomacke is without meate. There is also great heed to be taken in what signe the Moone is in, befor such time as any Purgation be minstred, for some signes are very good for it, and other some are cuill. Therefore I would wish all such as doe take vpon them the ministring of any Purgation, to have great regard before they doe minister it to the sicke person, the time, & the place greened, & also to marke wel al such things as are before rehearled, least that they doe more hurt

D 2

rhere

thereby in one day to that ficke person, then they are able to doe him good in a whole yeere, and yet they may doe it of meere simplicitie, nor knowing themselues what they have done, neyther are they able to cure the same wound which they themselues have made,

A Purgation must be taken hot, for so it offendeth the stomacke least, & it will worke the sooner

and better.

Also those that are apt to vomit, and are not able to endure the smell of the Purgation, let them stop their nostrils, or else let them smell to some odoriferous thing, when they are about to take it, and as soone as it is taken it is good for the Patient, to smelt on a toste of browne bread dipped in Vinegar, and to apply warme clothes to the stomacke, and to wash the mouth presently after that it is taken, with some odoriferous Wine, or else to chew some sweete and pleasant thing to take away the bitter taste or smell of the Medicine, and so by this meanes vomitting shall be eschewed.

Note also, that for the space of one houre after that any Purgation is ministred to any sicke person let the patient sit still and be quiet: & (in any case) let him abstaine from sleepe foure or sine houres after, whereby the strength of the medicine may the better passe into all parts of his bodie: but if the Purgation doe worke but slowly, then let him walke up and downe for a good space after, if hee can, and when it worketh persectly, then let there be great care of sleepe taken, (as aforesaid) for

there:

in Phisicke and Chirurgerie.

thereby the Operation of the Medicine would be foone stopped, and the Patient brought into great

daunger.

Likewife, in the time of Purging, imoderate heate and colde are to be eschued and therefore a great fire is necessary, insomuch as the colde and open ayre are both hurtfull: for the body must be kept in a temperate heate.

Moreouer, after that the Purgation bath done working the patient must be nourished with a meane quantitie of warme broth, that will breede good inice, and be easily digested: and afterwards by little and little, returne to his accustomed dyer

what neede he nath, and what is med mer sonings

Thus have I (as briefely as I could) heere expressed and declare the commodities and discommodities that doearife and growalwell by the ministring of such meete medicines as are necessarie to be vsed, both for the recouerie and preservation of mans bodyly health: as also for the commoditie & discommoditie that ensueth of Bloud-letting and Purging, (being all well and rightly ministred and vsed) and contrarywise of the great danger & burt that doth come thereof, if at any time they be mis-vsed: & therefore, I would wish al men (as they doe tender both their health & lines) to beware: of those ignorant and vnskilfull persons, who (most commonly) vse to open but one kinde of Veine for all manner of diseases, & docasso vie but one kinde of Purgation against all humours, not regarding, nor confidering with themselves any thing D 3

thing at all, eyther of the ftrength or age of the Patient, the time of the yeere, or the first original cause of the comming of the Disease, what soeuer Disease so ever it be, or of any other the circumstances (in this treatile) beretofore spoken of: but let them that are grieued with any manner of Difease, alwayes seeke for the counsell and helpe of fuch as are knowne to be both learned and I kiifull in Phisicke and Chirurgetie, and are also circumspect (as it is most needefull they should be) in all their proceedings vnto arte. And who for the most part, will duely and rightly consider, before they minister any medicine to the sicke person, what neede he hath, and what is most meete to be ministred vnto him for his disease. And also let the Phisition note that in the ministring of all potions Electuaries & pills, there ought to be greater observations to be had: then there ought to be in Glisters or Suppositories, for as much as those doe enter noe further then into the Gitte where the ordure lyeth, and by that place onely bringeth foorth the matter which cauleth the disease: but the other entring into that way which both meates and drinkes doe come into the stomacke, and there is boyled and fent into the places of digestion, and atterwards mixt with the juice, where of the substance of the body is made: and expelling the aduersary humours: Yet some part thereof remaineth in the Body. Wherefore People ought to take heede & be carefull what Medicines they doe receive, that in them there be no venepolitie,

in Phisicke and Chirurgerse,

nositie, malice or corruption : least for the expelling of a superfluous humour, which perhaps some good dyet, or some good & holsome broath made of good hearbes, or that the faid enacuation with Suppositorie or glister might bring foorth at leafure: rather then by defiring of too haftie remedy, they receive in Medicine that at which shallingender any venomus humour & vneuitable diftruction into all the whole body: And therefore it is a most happy thing for those that are sicke and difeased that can finde out, a skillfull, discreete, and learned philition, and especially such a one, as both his Medicines and Druggs are alwaies perfit and good, and not any maner of way corrupted. Moreouer it is chiefely to be regarded in all forts of People, that all bodies that are hot and moist may cafily fufteyne Purgation by stoole. All fuch persons as be leane and thinne having their members tender, may take great harme by purging. Those that are Cholloricke, and those that vie to eate little, Purging is very ill for them. Also for young children and aged persons, it is very daungerous for them to loosen their bodies more then great necessitie requireth. Likewise for those that are not accustomed to Purge, it is very noysome & hurtfull vnto them: but for those that live in good order of dyet, they neede neither Purgation nor vomite: Note also that after any purgation hath wrought to full perfection: Then thirstines and found fleeping be good fignes and tokens that the body is sufficiently purged: likewise by dayly taking

r

e

h

ut

re

c-

ole

es

ie,

ing of Medicines, and by dayly purging nature is greatly corrupted.

When you will purge any thing, first be fure to

make the matter flowing and foluble.

A Medicine to purge, ought not tobe mingled with any manner of meate ; but to be taken foure houres at the least before meales; or three houres after meales: except certaine ealie pills, made of purpole to clense and comfort the stomacke which of right ought to be taken at the beginning of supper or after supper or a little before that one goeth to bed, but let the patient be sure to make but eythera light supper or else none at all. And after a purgatio taken the patient ought to take good reft and not walke ouermuch vntill the medicine bath wrought, nor eare nor drinke any thing at all in the meane space. Thiefe things have I thought good to put the practifer hereof in remembrance of, because I have both seene and knowne many (that professed themselves Artistes) to have forgotten to instruct and direct their Patients in right course. as they onght to have done for the good government of themselues, after they had taken eyther purge or vomit. But now I will here cease to intreat any more of these things, (and according to my simple skill) to speake somewhat of the most part of all fuch diseases as are incident to mans body aswell inwardly as out-wardly and also of all such medicines (being duely and rightly ministred) as are most meete and convenient to be vsed for

the cure of the same disease what-

focuer it be.

DIVERS AND SVN-

dry approued Medicines hereafter expressed, for most fort of diseases remaining in mans body, and first of all for Aches.

CHAP. I.

An notable fecret for all incurable Aches or paines, in the ioynts or other places whatfoeuer.

CHAP

A K E the whole Horne of a Bucke, that was cast of, (the later it be, the better it is) and put alway the stalke, and take no part thereof, saying the very Horne it selfe, then cut the same into small thickness of pieces: and seth them in a gallon of saire water, and let it seth buttilit be consumed to a sinte of a sinte of a life.

tle moze: Then take forth the parces of the Porne, and let the liquor kand butill it be colve, and then it will be like a Jelly: Referve that, and when you have occasion to vieit, take some of it, and put it into a Sawcer, or some other convenient thing, and warme it, and then amount the place grieved therewith before a fire, both morning and exching, and let it soke in, by the heate of the fire, and it will heate the griefe throughly, within 9. or 10. dreftings, by Gods belpe. This hath bin truely and often proved.

CHAP.

Aches.

CHAP. 2

An excellent good Medicine for any manner of Ach or straine.

TAKE Aquanita, Neates-foote Oyle, Ox gall, and Oyle of Camamill, of each of them a pinte, and a handfull of Camamill it ielfe, and boyle them altogither, and the the same well butill it be well boyled, and comfamed to a pinte: Then straine it and when you will bleit, annount the place grieved there with, and this will assuage the paine immediately. Probatum oft,

GHAP. 3.

A maruellous good Medicine for an Ach.

A K E. a quart of the purest Malmsey that may be gotten and sire great Onyons sliced and pilled; then take a good quantitie of grose beaten Pepper, and let them all seth fogether until the Onyons are become so tender, that they may be strained and then straine them through a fine cloath, then take a cloath e wet it in the same liquo; strained, and lay it to the place graned, and in two or three times dressing, it will belpe. This hath bin proued by E. C.

CHAP. 4.

Another experienced Medicine for an Ach.

The a good quantitie of Scuruie Grasse, and there to a good quantitie of Barrowes Grease, and them them together, and then boyle them together, and when it is well boyled, then fireine forth the liquorants fome gally pot, and then stoppett close by, and kape it: and when you have occasion to bie it, annoynt the place graved often therewith before a good fire, and this will cure any Ach in a very short time. This hath bin proved.

CHAP. 5.

An other for the fame.

Take a pint of fomeinhat more of god Malmley, a pint of Capons greafe and a penyimath of Frankenfence, finely beaten to pointer and infited very fine: boyle all thefe together until the one halfe of the fame fluffe be confumed away, and then take it and firatine it, and to keepe it close in fome pot of other thing as aforefaid, and when as occasion ferneth for any ofe thereof then let the place greened be oftentimes anounted thereinth, and it helpeth. Prob: eft.

CHAP. 6.

An approved Medicine for an Ach or swelling.

Ake unfet Time, Lauender-cotten, Knottie Strawberries, of each of them one handfull, and ent and beate them in a moster, and when you have so done, then take 100; 12. young Swallowes out of a nest being ripe, and beate them in the moster, (seathers guts and all with the hearbs) until you cannot perceive the seathers, and then take halice pound of fresh Butter unfaulted, a mingle them togither, and let them stand so; the space of source and twenty houses, then seathen bestell. And so best twice a day, in annoynting of the place where the griefe is, and in sine of the place where the griefe is, and in sine of the place where the griefe is, and in sine of the place where the griefe is, and in sine of the place where the griefe is, and in sine of the place where the griefe is, and in sine of the place where the griefe is, and in sine of the place where the griefe is, and in sine of the place where the griefe is, and in sine of the place where the griefe is, and in sine of the place where the griefe is, and in sine of the place where the griefe is, and in sine of the place where the griefe is, and in sine of the place where the griefe is, and in sine of the place where the griefe is, and in sine of the place where the griefe is, and in sine of the place where the griefe is, and in sine of the place where the griefe is, and in sine of the place where the griefe is and the griefe is a sine of the place where the griefe is a sine of the griefe.

CHAP. 7. An other for the same.

Take Sage and Rue, otherwise called Hearb grace, of each of them one pound, and halfe apound of Wormewood, and halfe a pound of Bay-leaues: beate them together in a mozter: then take them pound of Sheepes-fuer, and cut it bery small, and put it to the hearbes, then put it into the mozter, and beate it with the hearbes, but ill the

Aches

fuet cannot be perceined: then take it out, and put thereto a pottle of Sallet Oyle, and fo mozke them altogether with your bands, butill fuch time as they be bery well faped in the Oyle, then kepe it chofe in an earthen pot, for the fpare of eight or ten bates together with your hands bnill futh time as they be very mell frepen in the Oyle, then kepett close in an earthen pot. for the frace of eight or ten daies together , then feth it in a baffe pot, with a foft fire , bntill the Arength of the hearbes be gone to try it, take a fpone full of it and put it into a linnen cloth and to traine it, and if there be any inice left in it, then it is not boyled to full per fedion, but if pe finde none therein,then it is well boyled : and thus you may usone all your sintments made with bearbes) then Araine it, and anoint well the place griened oftentheremith. This hath bin sufficiently proued. check one was one, if the end one care and the time is lead to

CHAP. 8.

Take very firong Aquavita, and two spanefuls of the water of Arstmart, and annoint the place where the act is, every day two 02 theat times, and it will speakely heate its

CHAP. o.

An excellent plaister to be made and vied for any manner of Achebe it irrany part or iount of the body.

Take a god quantity of Pigions doung, e a god quantitie of tity of degree of firong Ale, and a god quantitie of Camamill, then take the Camamill a the Pigions doung and fiampethem well together, and when you have to done, put the dregges therein, and then boyle them well all together for a god space, but all the time that the same is byon the fire be sure to be full styrring of the same, with some staffe or other thing so feare of burning of it, and when it is well boyled, take some of the same and spread it than a single than a

fine limnen cloth that is cleane, a lay it to the place greened as hot as it may pollibly be fuffered, and so cause it ouer with some wollen cloth or other thing to keepe in the heate, a this by gods grace will helpe you in a short time Prob.est.

CHAP. 10.

An other for the fame.

Take Aquacomposite and the ople of Neres feete luke warme, and anoint the Patient upon the place of the griefe, laying trame clothes thereon and it beliefth. For this bath bin truely proceed.

CHAP. II.

A medicine for an Ach or shrinking of any senewes. The the tenterings of R osemary and Marsh-mallowes of each of them as seven positions as you can gette and gather your heartes when they be day, from any raine and dew: beate them ma moster very small, then take May butter well clacified, and put it to the hearts, and mingle it in a westest, and then let it stand for the space of soute dates; then set it ones the fire and let it seeth till all the strength of the hearts be gone, then take a little of it in a spone, and let it drop upon your naile and if it be greene as the Emeraulbit is perfect, and then put it into an ears per pot, and toden you will be it, you must warme it.

CHAP. 377.

An other for the fame.

Ake two sponefulls of the unice of Ruc and as much inomens Milke, that giveth sucke to a Painen. Childe, and boile them togither extherin a Pomparnet shell or else in a Porcenger, butill it be curdled, then straine it and take blacke Wool and dipit in the same inice and drop two drops thereofinto your Care and so bie it both morning and eneming, so, the space of 9. 02 10 dayes togither, and kape it bety warme, and this will helpe you. Probatum oft.

CHAp. 378.

A fourraigne Medicine for the paine and buzzing in the head which hindreth the Hearing.

Take a Clove of Garlicke and pill it cleane, and then make 3.024 holes in the middest of it, and dup it in a little English Hunny, and put it into your Ceare, and put a little blacke Wooll in after it, and so that night, let the Patient lye upon the contrary side, and let the Care that is stopt be upright, and the next night solviving let him wie the other Care in like sort and lie on the other Care we before, and so let him alter his course energy other night, and whe it so the space of 8.029. Dayes togither, and this will expulse all it humours out at his pole, ease the paine and reserve the hearing. Probatum est.

CHAP. 379.

An experienced Medicine for Deafenes in the Head.

Take Bay-leanes, Bay-berries, Berony and Sticardes of ethor them one handfull and feeth them in white Wine butill the one halfebe confunced. (but that be for an aged person be Malmie in the of whit Wine) ethen put it into a vessell that both a narrow mouth, and let the Patient hold his Bare upon it (it being bustoped) so that he may suffer

Deafenes and Hearing.

it (the same not being to hot no, to colve) then take Oyle of bitter Almonds, e put 3. 02 4. deposithereof into his Care, and then flop it close with a locke of Shapes Wooll that groweth betweene the Sheepes legges, and the put a litte Muske Civet therewith it will be the better. This was proceed by Thomas Stenens of Buthton.

CHAP. 380.

An other experienced Medicine for one that is deafe, and that his hearing is almost cleane gone.

Ake a Mod Onyon and picke out the Caze cleane that is in the middelf thereof, and put into the same place some Oyle of roasted Almonds, (but let the Mynion be some object that we befoze you put the Myle therein) and so let it stand for the space of a pight, and then bouse it and straine it into a porrenger or other cleane Dish, and let the patient have three droppes thereof at a time put into the Care, both Morning and Quening, and let his Care be close stopped with a little blacke Wooll which groweth whoer the Care of the blacke Speepe, and when he is in bed, let him lye on the same side: thus wing first the one Care and after the other in like manner as besoze, and by Gods helpe it will core bim.

T Another approued Medicine for onethat

Take a god big fluer Ealc(if possibly the may be gotten) ozelle some other bright Gale, and roast her bron a spit, and let the dripping of her be kept very cleane: in some Carthen Aestell, and when you doe goe to bed, put the quantitio of aquarter of a spone full thereof at a time into your Gare, and then stop it dose with a little of the Wooll that groweth betwirt the two Gares of a blacke Sheepe, and the nert night following vie the contrary Gare as a fore is said, and so continue this for the space of 9.07 10. Dayes, and it will belpe you. Probatum est:

Eyes,

Eyes and Eye-fight. Fol, 68.

Eyes, and Eye-fight.

IRST It is to be considered what things are good for the Eyes, and what are not : for F and the Eyes are the most necessary Members of all other appertaining to Mans body, and without the fight of them, we can of our owne felues doe nothing : therefore thiefe small Members are chiefely to be regarded, and according to my fimple skill and knowledge, I have here fet downe divers & fundry Medicines for the Eyes, who are the onely windowes of the mind, both for ioy and dread, and the most of our affections are openly knowne and seene through them and they are ordeined and made of purpose to lighten all the body: where Nature hath given both Browes and Eye-lids for to defend and keepe them in fafety, and the better to refift all fuch things as in any wife are prejudiciall and hurtfu!! vnto them, as appeareth heere in the next Chapter.

Thinges very hurtfull for the fight.

T Deate Garlicke, Dnyons a Leckes. To eate over many Lettice. To trauxile of to goe to laddains after Peate. Hote Alines. Colos syse. Drunkennes. Bluttony. Hike. Cheefe. Duermuch beholding of white and coulours. Huch fleepe after meate. Twoften bie inletting of Bloud. Colos worts. But. Hire. Huch weeping And oner-much watching.

CHAP. 383

Eye, and Eye-fight.

CHAP. 383. Thinger good for the fight.

Cafurable flepe. Red Moles, Hernaine rotes Fennell, Selandine, Pimpernell, Dculus Chrifti, To wash your eyes often with faire Kunning Water, To loke byon any greene or pleasant couloures, To loke often in a faire

pleafant, and perfect Glaffs, And to wath your handes and fate very often.

Waters for the Eyes.

GHAP. 384.

An excellent good Water to preserve the Eye-sight.

A & C a new laid Egge, and roall it bard: then cut the shell in the middes, and take south the Polke cleane, and then take a piece of Coporas and put it into the same place where the Polke lap, and then binde the Egge

togither againe, and let it to be in the fire againe, and let it remaine there untill the Coposas be diffolued to water: then take all the white out of the field, and cut it into iniall pieces.

Eyes and Eye fight. Fol, 99.

pietes, and put it into a Glasse of faire Running Water, and so ther it Camb a little while: and then Craine it through a fine timmen Cloth, and képe it in a Tiall or Glass close stopped, and energ Popping and Quening let the Patient walh his Eyes therewith, and it will oce him exceeding much god. This hath bin often proved.

CH AP. 385.

An other good and comfortable water for the Eyes.

Ake Sage, Fennell, Veruaine, Betony, Euphrafia oz
Eyebright, Pimpernell. Sinkefoyle, and Hearbegrace, and lay them all to thepe in white Wine, foz
the space of one plight and then outli them in a Stillitozie of Glasse oz Peinter, when you will be it: take a
sae linnen Cloth and die in the same Water, and so be to
wath your eyes often therewith and you shall perceive your
sight to grow very cleare and bright in a short space. Probatum est.

Fleagme.

the white of an Egge beaten till it be become as this and as cleare as water, then take all thiefe and boyle them together butill the on halfe of the same be consumed, then train the same licques into some cleane westell, and put therein halfe a pound of fine Suger, halfe an ounce of good Mace beaten to powder, and then let it with againe butill it come to a pinte, and then be it somewhat warme both Mosning and Cuentum for a certaine space and this will helpe you. Probatum est.

CHAP. 454.

An other Medicine to cause Fleagme to avoyde that is congealed about the heart or stomacke.

Ake a god quantitie of Heyrisse (otherwise called Dose meat) which groweth in diches, and sampe it in a Bozter, and then put thereto a quart of stale ale and let the partie grieved drinke a god draught thereof warms every Porning sasting. Also let the partie grieved take red Fennell and beate it, and strains south the inice thereof, and a pretty quantitie of clarised Hunny and seth them well together and let him vieto eate of the same with some sine Albeaten Bread every Porning or at any other time that he shall thinke meete, and this will otterly expell all congealed pleame quite away, and it will ease the heart and stomacke greatly.

CH AP. 455.

A very good Medicine for to breake Fleagme.

The Hunny and new Butter that is unfaulted, of eyother of them a like quantitie, a few bitter Almondes, blaunched and beaten very well and mingle them with the Butter and Hunny a forefair, and let the Patient eate a little thereof every Porning fasting, and it will doe him ercerbing much god. This hath bin truely proved.

CHAP. 456.

An other for the fame.

Are a good quantitie of Smalledge and boyle it in Vinegar, and let the patient walh his breaft often thereinth then take the Smalledge and put it in a Cloath, and binde it fatt to the Stomacke of the patient & there let it remaine to; the space of 3.02 4. houres and it will helpe him.

> CHAP. 457. An other for the fame.

Ake Sorrel and fampit e ftraineit ethen take the inice I thereof and temper it with fale Ale, and let the patient brinke a god braught thereof enery morning before be arife out of his Bed, and let bim flepeafter it, and be thall anoibe greate ffoze of Fleagme.

CHAP. 458.

A good Gargreffe for the Fleagme. Ake Endiue water and Hunny fuckle water, of ech of I them a like quantitie, and a goo sponefullof Mustarde that is pure and god, and a sponefull of Hunny, two sponefulls of Vinegar, and a little Pepper beaten to powder, and s. 02 3 . branches of Rofemarie & a fet leaues of Red Sage. then put all thefe togither, and heate them byon a Chaffing. bith of coales luke warme, and let the patient put a sponfull thereof into his mouth at a time, and let him holde his head bywards and wash his Threate well therewith, and it will cause him to anoide much ffleagme.

CHAP. 459.

A very good Drinke to cause one to avoide Fleagme from the Stomacke, and to make it come vp very eafily.

The 12. sponefulls of Rose water, and 6. sponefulls of Conduit Water, and 3. sponefuls of whit Wine Vinegar

Fleagme.

and a quarter of a pound of fine Suger, boyle all this letogither in a peinter parenger upon a Challing-biff of Coales, and from it very cleane: then take a sponefull of two of it topink it luke warme when you need it, and it will bely you. CHAP. 460.

An other good Drinke for the Fleagme.

Take Partly Rootes, Fennell Rootes, Pellitorie, Hisop and Liquorice, of energy of them a like quantitie, and stampeand by the them altogither and boyle them in Ale, and put therein a good quantitie of clarified Hunny that is pute, and when it is boyled a little moze, then straine it and tole to by inke thereof both Pozning and Enening and this will belpe you.

TAn other for the same.

Take a pints of Hisop water diffiled, a quart of god Muskadine, 3.024. races of god case Ginger, the same being pared cleane, and cut into small flices, and twice as much Licquorice, pare and scrape the same like-wise, then put thereto a god handfull of fine Suger-candie brussed a little (that done) put all thiese together in a god big Glasse to stand and soke well, and so let it stand so, the space of 24, hours together, but you must shake it very often whil'st it is a skaping in the Glasse, and let the Glasse wherein it is be very close stopped, whereby no agree may enter therein: and so drinke it at pleasure.

This hath holpen some that could scarse speake being troubled with much Fleagme in their throates and stomacke and could scarse setch their winde through

Fleagme and Coughing. Probatum est.

GHAP. 462.

A very good Drinke for the anoyding of Fleagme,
and for the stopping of the Pipes

Take a pottle of Barlie, and fethit in a gallon of cleare mell Water, let it feth butill the Barlie be foft them trains

fraine if, and put thereto as much new Woort as of the afore Liquor, and put therein a god quantitie of Sage, and as much Hisp, and a peny-worth of Liquorice well bruised a then seth it agains butill it be halfe consumed away: then traine it and put it into a Blasse, or into some other close bestell, and so let it kand for the space of one whole day, and let the partie griened drinke two or three sponesults of it at a time both Morning and Euening, and this will belpe him in a sport space. This hath bin well proved.

Also Okefcarne banised, and the inice thereof danke eye ther in white Wine, or Sale Ale purgeth Fleagme and Spelancholines greatly. This hath bin likewise proved.

Sw Flux

CHAP. 463.

An excellent remedy for the bloudy Flux, if it come eyther by wearines of the heart, and disposition to fwound, or else by heate that is in any of the members of the bulke.

A h C a goo quantitie of fine white Suger, a goo quantitie of Rofes, and a good quantitie of Rofe Water, and if you have noe Rofe Water, then you may the faire Raine water, in the bettered a then feeth a little Markicke,

Allom, and Cloues therein, and let the Patient beinke often thereof and it will be bim exceeding much god. But if the flur be caused by any Chollozicke humours, then it must be aborbed by taking of Raine water, that Roses have bim sobben

Flux.

forder in and a plaister made of white Roses is also good against this disease, thit be but layou epther to the yarde, or to the Regnes.

T An other for the fame.

Ake a good quantitie of Plantine elieth it in faire running water, and let it boyle butill it war yellow, and the strength be quite out of it, and then straine the same water, and then take a piece of cleans. Iron and heate it red bot in the stre, and quench it in the same water and so doe this 10.0, 12. times againe together, and then straine it againe, then take a good quantitie of Almonds unblanneded, and stampe them very well and mingle them with the same water and so make Almond Milke thereof, and when you have see done, make a toas of sine white Bread, and put the same into the Wiske, and then let the partie tiseased both eate of the same toas and danke of the spelke asozesaid.

This hath done many People much good in Vsing of

it often.

T An other for the same.

Ake new Pilke (as it commeth from the Cow) and fet it one the fire and when it sethes put into it a good piece of Roch Allom, and when the same is molten, there will arise upon the top thereof, a. curre much like unto a postet curre, scumme of that very cleane, then take the Whay and brinke it as hot as possibly you may abide it, and if your stomacke will beare it, you may eate the curre also.

T An other good Medicine to ftop the bloudy Flux.

T ake a good quantitie of the Poth of red Coleworts, and the topon a hot Ellestone, or elle in an Duen where bread

bread hath bin drawns forth, and make a powder thereof, and put it into a cup of pure red Wine, and let the Mine be made bloud warms and give it the patient to drinke, and in bang of it oftenthis will beloe him without all boubt.

T An other for the fame.

Take a god handfull of Beanes and day them cyther in an Duen or opon a Tilestone as before is said, and let them be so have as the huls may shale of them, and then brough a sine fearer or boulder: then take a pinte of god red Wine and set it on the sire, and put the powder of the Beanes into the Mine, and the street well, lest that the should grow but the pan wherein you boyle it, and so be butill it be so thicke that you may sutified sines when it is colde, and so let the partie grieued take 2. 023 slices there of blowd warme, every sporning and Euchings a certaine space and this will helpe him. Probatum est.

CHAP. 463.

Another Medicine for the bloudy Flux.

Ake two handfulls of Rice and a pinte of pure red Wine, and a god quantitie of Cinamon beaten to powder, boyle the Rice and the Cinamon powder in the afozefaid Wine, and let it boyle withill the both tender and thicke withall: then take some of the same and spread it upon a fine Linnen cloath and double it, and so lay it unto the Pauill of the party griened as hot as possibly he may abide it, and as it dryeth and wareth color moullen it againe with a little red Wine the same being made bot, we this so the space of 3.024. Dayes often, and this will helpe you. Probatum est.

Flux.

CHAP.1469. on home Hing Gra

Plague and Pestilence. slal

Plague and Pestilence.

T Certaine Rules and good infructions to be observed against the Plague, &c.

ORASMVCH as the force and infection of the disease called the Plague or Pestulence, hath here-tosore bin too well knowne and felt in divers and sundry places of this Realme, & for that divers Citties, Townes, and other places of this Realme, have binne so grie-aously yeared there with therefore

(according to my fimple skill and knowledge therein) I have thought good to publish and make knowne vnto all, as well such preservatives as are good to be vsed, observed and kept by all forts of people for the anoyding of the same disease, being greatly infectious, and easily taken divers & sundry waies: as also for the better preservation of those that are in health, from the infection of the disease, and to cure and order those that are any way infected or grieved with the same; and therefore these things following, ought chiefely to be regarded, and fully observed. (Viz).

I To hepe your, Houles Partes, Backfides, Strates, and Chennells cleane from all flanding puddles, dunghils,

Take Hearb grace, Southernwood, Mugwoort, and Wormwood, of schof them a handfull, e 3. 02 4. handfulls of Iuniper Borrice which are blacke, and then sut and there

Plague and Pestilence Fel, 154)

thred the hearbes bery finall, s put them into an Carthen not as pipker, & put to them a gallon of whit Wine Vingar, and let them fohe there for the space of 7 mights, (if they be bap, but ff they be grane, then let them not foke above 14. boures)then take a banofull oz t. of the fame bearbes, foztb and put them into a Still, and then put therein a quart of the fame Vinegar, and to biffill them with a foft fire, (for e. uermuch fice will wafte it .) and when it is diffilled put as much moze as afozefaid, into the Still, and fo to butill por bane diffilled allithat being bone, put it into a pipkin or ear then befiell againe, o then put therein as many of the fame bearbesfreih now as you bib before, and thenlet them foke for the frace of 7 or 8 bayes a nights more, and then biffill them againe (as you bid before) and fo ble the Bearbes and Berries, the third time againe as poudib twice befoze: and then put into the pipkin 4, sances of pure and dod Methridatum, amonoft the bearbes, og if it can not be bab, take 6 02 7 ounces of goo Triacle, and put therein : and when it is well diffilled putit into a bouble glaffe, and for it close and wind a peece of cleane leather about the top of it, and for keepe it close and inben occasion fermeth for ble thereof, and that you perceive any one to bee infected with the Blague. then give bim that is grieves 4 ounces thereof at a time, but if it be a woman, gine ber not aboue tounces, and to a chita according to the age, and as the child is able to beareit, and let bim og ber that fo taketh it , fweate byon it for the bace of 2 02 4 houres after the taking therof if the patient be able to induceit let bim fipeate louger, and let fone boby frand alimates by the fick person to dry the supertes from his Pare. leaff that by putting of his oz ber bands out of the bed, rold be taken and more banger of beath enfue thereby and mich out all boubt , by Babs belpe , this will yall bim comfort and belie in a float space. This is a maruelous good enent. cine and bath bin oftentimes of late experienced : This is allo good against a Lepzose being much bled as afozefaid, CF AP. 694. CHAP. 692.

Plague and Pestilence 19

CHAP: 6021

An excellent good drinke generally to be vied for all forts of people that are infected with the Plague, and to be made with small costs.

Ake Burrage, Burnet, and Marigoldes (which are of a browne collour) of eth of them a good handfull: then take 9 03 10. crops of the poungeft Rosemarie, and boile all these together in a quart of Cale Ale clarified: then put therein a little whole Mace, and a pretty quantitie of fine Suger, and a reule of White: 02. Whe aren Bread, and let the ficke person brinke of this during all the time of his,02 her ficknes, and this will be most comfortable and aco.

Alfo ble to put pimper nell in the ficke perfons broth, that you be commonly make for him syther to fup or eate,

and it will be the better.

· CHAP. 691.

An other good drinke to be vied to those that are infected with the Plague.

Ake Berries of Iny (that are ripe) and byg them in the shaddow: and then stamp them to powder: then take bi. a byam of the same powder and temper it ivell with the sunces of Plantine Water, and when the same person is destrous to brinke, let him take a god braught thereof: and let him remaine in his bed, and sweat as much and as often as be can, after be bath taken it, then waters a cleane shirt so; him and put it on. (and if his shirts may be shifted often, it will be the better after his sweating) and like wife his shates and clothes, and in thing of this so; the space of 3. dayes togisher, he will exther does not make the sun trucky proudd.

Plague and Pestilence. Fol, 155.

T An other pretious drinke for one infected with the Plague.

Akt Fetherfew, Matfellen, Mugwoort, Solfequi, Scabious, and Mallowes, of ech of them alike quantitie, wash them cleane, and stampe them, and temper them well with stale Ale and give it the ficke person to drinke, (the quantitie of 6. sponefulls thereof at a time) and if it be taken in time, it will both destroy the corruption: and also keepe the sickeperson from all danger of death. Probatum off.

CHAP. 699.

T An other for the fame.

Ake a god quantitie of Scabious water, and Bettony Water, and mingle them together with a god quantitie of Triackle of leane, and give it the patient to define imediately after that he suspected himselfe to be insected. And if it happen that the sicke person since himselfe greatly growed, and that he begin in any place to grow soze, then take Elder leanes, Red Bramble leanes, and Mustard seede, and stampe them altogether, and make a plaister thereof, and tay the same to the soze, and this will both deale.

CHAP. 696.

An other good drinke to be made and vsed for the same purpose, or otherwise, &c.

Ake 3. ounces of Aqua vita, & ano; and an halfe of Rosewater, and put 3. drams of person good Cinamon, and a dram of Pellow Saunders to Repe there in and when it is well staped, then strainest through a happe strainer, & sweeten it well with consecute of Roses, and when occasion scrueth for the thereof, take the quantitie

Plague and Pestilence.

of an og. thereof at a time, and give it the fike person in the Morning fasting, og else make a toast of sine Manchet, og wheaten bread, and soke the toast therein, and let him eate it and it will be him much god.

An other good drinke to be vsed in the time of Visitation.

Ake 5. Ipwnefulls of Dragon water, 3. sponefulls of heterongest white Wine Vinegar heap be gotten, visa a sponefull of Triacle of Iene, a quarter of asponefull of Bole Almoniako, beaten into sine powder, and as much of somewhat more of the Rote of Servall of Venicelikewise beaten to powder, and when any one is insected (or else not) and when he taketh it, let him fall from both meate and drinke so, the space of 12. hours after, onles he thinke good to take of the same drinke againe, and he shall receive great comfort thereby. But if you can get any powder Imperiall, put in a like quantitie as of the rest and it will be the better, this must be taken alwaies bloud warme, and as often as you shall thinke convenient your selle.

CHAP. 698.

An other for the same purpose.

Ake an Onyon and make a hole in it and take out the inner Core, then take Dragon water, Triacle and Pepper, (banised) and put them altogither into the Onyon, and roast them in the emberg, and then banise it, and strains it to the pure Malmsie a give it the patient to bainke.

This is a present remedy, if it be taken before the

Heart be infected . Probatum eft.

TA good Medicine to prouoke sleepe to the sicke person.

Take a good quatitie of Womans breaft Milke, and put thereto a like quantitie of Aqua Vita, ffir them, well togither

Plague and Pestilence. Fol, 156.

togither, and moisten the temples of the head of the patient and the nosthills well therewith and let it be laid on with some feather, as with some fine linnen cloth, and this will be much god. Probatum est.

CHAP. 700.

A Maruelous good drinke for them that are infected with the Plague or Petitlence.

Take y. handfulls of Sorreil, a handfull of Violet leaves, and a bunch of fower Grapes, and beate all these together, (Malkes and all) then Maine them with Buttermilke. and make a postet of the same, and let the ackeperson deinke as much there of as you shall thinks and.

CHAP. 701.

An other good drinke for the fame purpose.

Ake Lease Gold and minglest with the suice of Lemmons, and a little Suger candie, Cloues, Mace, and a little quantitie of Liquorice finely pared, and slittle quantitie of the powder of Angellica, oz else of the Decoction of the same roote, and let the partie grieved drinke this warme, and it will be him marvelous much good. Probatum est.

CHAP. 702.

An other excellent good drinke for the ficke person.

Tak Cardus Benedictus, Red Sage, Hearb grace, Elder leaves, and Red Bramble leaves, of eath of them a like quantitie, and stampe them altogether in a Mozter, and straine them through a fine linnen cloth, with a quart of White Wine, and let the sicke person drinke 5. 026. Spoones sulls every day, but if it be taken, and, bled often before intection it will preserve one from the Plague a long space after. Probatum cft.

CHAP. 703.

A soueraigne Drinke for any infected person.

Alte a piece of time Gold of the leaves of pure beaten Gold, put it into the inice of Lemmons, and let it lie therein

Plague and Pestilence.

therein for the space of 24. houres, then take the same suice and put to it a little powder of Angellica Rootes, and then mingle them with White Wine, and let the patient brinks

a amo braught thereof.

This is a most pretions drinke, and it is greatly to be wondred at, what helpe and remedy some that have vsed this drinke have had thereby, although it hath bin supposed by many learned Phistions that the sicke persons were past all hope of remedy: yet by Gods helpe they have recovered againe.

T An other good drinke to be taken eyther before or after infection.

Take Bettony water, and Scabious water, of eth of them a good quantitie of fine Triackle and temper them well togither, and let the patient drinke it, and it will expell the benow or pollon cleane forth. Probatum eft,

The Cardus-benedictus and distill it, and Centorie, and distill it like wife, and mingle the two waters to gither and let the sick person drinke a good draught thereof with I riackle and it will be him marvelous much good.

T. An excellent good drinke for the Plague if it be taken in time.

Tahe a dzam of Methridatum, and gine it the patient with Dragon water, White Wine, oz other licquoz, to dzinke when he supposeth himselfe insected first.

Plague and Pestilence. Fol,157:

CHAP 707.

An excellent good Medicine to ripen and bring forth the fore.

Ake a white Onyon, and cut it in pieces and 3. ounces of Butter that is cleane without falt, and the waight of 20. B. of Garlicke cleane picked and the quantities of an Egge of Leauen, and a little Otemeale finall beaten, then boile these togither with a little new Milke, or else Water, and make a poultesse thereof and lay it very wrame to the soze, and it will riven it. Probatumest.

CHAP. 708.

Another for the same.

If the botch happen to appeare, then take a god quantitie of Elder leaves, Red Bramble leaves, & Mustard seede, and Mamp them well together and make a platfer thereof and applight to the soze, and it will beat sozeth at the benom and corruption.

CHAP. 709.

An other for the fame.

ake a handfullof Smalledge, 03 Louage, if you can get it, and 2 handfulls of Valerian, and 2.03 3. rotes of Danc-wort, and fath them all in faire running Water, and fresh Butter, and put thereto a feto crums of inheaten Bread, and make a poulte the therof s lay it warme to the foze, and so let it remains there butill it breake.

CHAP. 710.

T An other experienced Medicine for the Plague.

The a Cocke, a Chicken, of a Puller, and pull all the feathers cleane of the taile, to that the Rumpe may be bare, and then hold the Rumpor bare place to the fore, and immediately you thall the the Cocke Chicken of Pullet 1911.

Plague and Pestilence.

gape, and labour for life, and in the end it will dre: Then take an other Cocke, Chicken, or Bullet agains and doe the like, and if the same die like wife, then take an other, and so doe as aforesaid, and let the partie grieved be applyed therewith as aforesaid, as long as any of them do die.

CHAP 711.

An other excellent good plaister to draw the fore. Alte Camamill flowers and Mallow leaves of each of them an bandfull and cut the Malloow leaves and the Camamil Flowers bery fmall e boile them in faire Hunning Water. (but let o water be moze the an inch a boue o bearbes) elet them boile bntill the water be almost confu med: Then put therein tt. 03; of Lynfeede , beaten to fine powder, di, an handfull of theaten Flower ti. 03. of Ovle of Roles, and 3 02 4 03. of Swines greafe, (the frum being taken away) and temper them wel togither, and then fet them ouer a foft fire, without any (moke, and ftir them very well with a flicke, and fo let them boile altogether, bn. till you perceine the water be quite confumed : Then take them of the fire and beate them well togither, in a mozter, bntill pou fe them well incorporated togither, and in feiling to be fmoth and not rough: Then take a parcell thereof and beat it eyther in a pozrenger, oz elle in fome Carthen bill toon a chafing bift of coales, and then fpzeabe it thick bpon a fine linnen cloth , oz elfe boon a pecce of leather, & fo apply it to the foze, and this will brain it according to your owns Defire. Pobatum eft.

CHAP. 712.

T An other for the fame.

Take a new loafe of Bread, and lay it to the loze as hot as it may possibly be suffred. (as it commeth such of the Duen) and afterwards let it be burnt; (ozelse byped in gently) ozelse take leaves of Scabious oz Sorrell roassed, ozelsed, ozelsed,

Plague and Pestilence Fol,158.

elle 2 03 3 Lilly rootes roafted under the embers and applied to the foze, all these are good to ripen the foze.

CHAP. 713.

A very good plaister to draw the Plague fore to a head, and to breake it.

Take it handfulls of Mallowes i handfull of Linfeede, a handful offoinge Dow, and 2 of 3 Lilly rootes and stamp all these together very small, and boile them in a quart of Wine Lies, until it be thicke, then laye it an inch thicke of more upon a pace of Leather that is somithed broader them the soze, and let & borders of the Leather be plaistered with shoemakers war, and that will cause it to cleane fast, and this will bring south the botch, and breake it in a very short space. This hath bin truely proved.

CHAP, 714.

An other plaister to draw the fore.

Take a spoonefull of Hunny, 2023 spoonefuls of the inice of Spurge a spooneful of Furpentine, e a good quantitie of wheaten Flower, and temper them well togither without any fire and make thereof a plaister, e lay it to the sore, eat the end of energy 14 hours renew the plaister, and this will reaw it wonderfull much.

CHAP. 715.

g Another for the fame.

Take if handfulls of Scabious and famp it in a Poster, then temper it well with it of of Swines greafe, that is salted, and the Yolke of an Egge, then stamp them altogether, and lay some part, of this warme to the soze, and it will draw it exceeding well.

CHAP. 716.

Plurifie.

Plurifies.

CHAP. 716.

An excellent good Medicine for a Plurisie.

Alk & Brooke Lime, Sheepes Suet, and a little faire Water, and fry them together in a frying pan, and make a plaister thereof, and lay it to the side of the patient, and it will braw footh all the corruption. This hath

bin truely proued.

CHAP. 717.

Another good Medicine for a Plurisie or

Take Aqua vitæ and Capons grease, of eth of them appetty quantitie, and boile them togither: Then take a little Blacke Wooll, and dip it therein, and lay it as hot as it may be suffred to the stomacke of the partie griened, and it will ease him very speadily. Probatum est.

French

French Pox. Fol,159.

French Pox.

OR ASMVCH (Gentle Reader, or practitioner of this Arte) many thinkes might here be intreated off, concerning the disease called the Pox; But mine intent is not to meddle or deale any further therein, then of

that little knowledge and experience, which I have had mine owne selfe in the curing the same disease : But it is wel to be considered that ther be divers & sundry kindes of Pox, (as the Swine Pox small Pox, &c. Which are vsuall among'ft young people:) and the French Pox, most daungerous of all, which commeth divers and fundry waies. As by drinking and keeping of bad company, both men and women, in having carnall copulation with those that are infected with this filthy difease, also in eating, drinking, and keeping of company with those that are infected therewith. And also it is taken by divers & fundrie other meanes and waies, which here it would be too tedious to be spoken of: But yet neuertheles, according to that little knowledge and experience that I have in the curining of this difease, I have heere fet downe the Medicines themselves, as briefely as I can, with the intent that the vnskillfull may the more. easier learne to cure this disease, which now remaineth too common in this age) which by meanes thereof many people are diffigured in the face imperfect in their speech lame in their limbs and ioynts, full of paine and aches in their bones, besides many other corrupt humours in their bodies And

French Pox.

And many are vtterly dismembred and spoiled in divers other parts of their bodies, and many doe loofe their lives. thereby, for want of helpe in due time : therefore let those that are skillfull instruct the vn-skillfull, and let euery man or woman indeuour themselves to learne and finde out all fuch things as are & may be for the preservation of health, which is the onely Iewell that man hath inthis life; for which purpose as I said before, I have gathered together (as out of many gardens, woods, and fieldes) and heere fet downe in this Booke or Store house asit may be rightly tearmed) a great number of experienced Medicines, for most part of all diseases incident to mans body: And now (Godwilling) There intend to intreat somewhat of divers forts of the Pox, as briefely as I can or may, in manner and forme as hereafter followeth : but first of all, I will be in with the French Pox, which is the most needefullest of all to be touched or spoken of.

French Pox.

The manner how to cure the French Pox, if it be rightly observed.

It of all it is to be under too, that the ficker person must be kept in a chamber, (whereinneyther wind no, appe may come in to hurt him hubere a fire must be continually kept 03: else ho must be kept in a Stew which thall

not not be alwaies to be kept hot, but it must be so close and so nearlined that no agree may blow open him buring the time.

time of the continuance of his cure: And like wife great care muff be hab, that be take not color , foz eitherof both mill burt the fiche perfon bery much. Therefoge if the fiche perfon be to be cured in winter . or in the Antumne, be muff be fare to have fire in his Chamber enery moming early (efpecially before day, for then the colbe moft fernent) Alfo the riefts of the windowes, and chinks in the wals mult be close Hopped with morter or other things. And the chamber boze (wherein he is to kept) must be close floped, and conered oner with a conertet or carpet, whereby no cold may iffue in at the creueffes or chinks of the fame. And toben be is thus 0202ed , his meate muft be simmithed by little and lite tie. first the fourth part of that be which was wont to eate. and then the third part, and thoutly after the one di . Inhere, by be may ble bimfelfe to fuffer hunger as much as may be. And his Wineif he soe trinke any, muft be mingled with faire mater: E ben be mult hane fuch a purgation ministred buts him, as thall be thought convenient to take away the matter or caufe which nouritheth the difease, or els fuch a one as will clenfe the belly perfectly. That being bone , the cure map begin in this manner and boubtles to be beought to amb perfection, if it be orderly done as it ought to be.

CHAP. 719.

An excellent Medicine for the curing of the French Pox.

Ake a Pi. of a kinde of wood that is called Guaycum. and beate it intopowder, or elfe get it turnd at the Turners, and made into thauings and let to foke in the quantitie of 8. Pi of fatte running Water, (but if that pont Gnaicum be beaten to buft in a Mogrer it will bethe better, and it will be the better foked, and brought betterto morke in perfection, by reason that then all the subffance of it will foke out of it) and let it foke in the fait mater, foi the feace of a day and a night. Then take it and feeth it in a 2D 0. 2. nem

French Pox.

new earthen pet (that is well glaged toithin) byon a foft fire, of charcoles, and fe let it feeth foz the fuace of 6 027. bourrs, or butill fuch time as the one bi. of the liquor be confumed, and let there be great bebe and care taken , that it runn not oner into the fire, by onermuch heat, for that which puerfloweth taketh much of the fubitance oz bertne from the reft, and therefoze it muft not be boiled in any flame, but with a moderate fire made with a few coles, and let mot pour pot be filled by to the top by the third part. And inhen it is bery mell fobben frum it cleane, and keepe that which is fcummed of, and anount the Goestherewith, and it will both bay them bp, and cure them, and for theliquoz it felfe, let it be ftrained and put into a daffe, and then put to the fame grounds againe to the quantitie of 8 Pi. of faire mater moze and feth it agame (as befoze) and when it is mell (obten . fraine it and put it into a glaffe as you bib the other before: Andlo gine of this laft mater to the fiche perfon to trinke continually with his meate, and the fift House muff be taken by the ficke perfon every bay in this manner: (Viz) in the morning at 5. of the clocke, 02 thereabouts be muft take p quantitie of a cupfull milke warme. and agains at 7 of the clocke at night: And after be bath taken this Medicine let bim reft bimlelfe foz the fpace of 4. boures after it: And for the first a hours, let him be clofe co. uered, by belpe of the beate the Bedicine map the better be digefted & difperfed into all parts of his boop : & the par tient may (weate boon it. (which if he doe it will be the better and if he be clofe couered with elothes , an houre before he take the Medicine it will be much the better) because be may be bot, when betaketh it) But in any wife let him not arife out of his bed , for the fpace of s. boures after be hath taken his cup of brinke, and let him take his meate a bout the none time of the bay, and not before, and then as little as may be, infomuch as this Bedicine requireth an empty fomacke, and if ever be will be made perfet found,

he must be dysted and kept in this lost, for the space of 30. dayes togither And after such time as he supposeth him-

felfe to be well, be ought to purge bimfelfe againe.

Wat if his body be Brong, able to indure it, let him take a purgation the 15. Day after the beginning of his cure ,fo2 this reason as Alexander Aphroditius affirmeth, that those that are kept bungry & receive not their meat as they mere accustome to boe, fall alway and boe gather a certaine tharp matter, and egar fo that of neceftitie (be faith) fuch filtbynes must be another, whereby the body of the fick person may be kept empty But this medicine befoge mentioned muft not be ministred, in the same morning that be taketh the purgation but at night let bim take it againe : And afterwards be may eat moze largely then be bid befoge : Bogeouer bpon the 30 day be may take the like purgation againe, and afterwards increase his byet by little and littile , butil he come to his acustomes ovet againe. But certainely the moze bunger o fick perfb abibeth buring o time of his cure the moze perfecter equicklyer be thall be cared: and although his befire of eating grow baily moze and maze: ret be muft remember to abstaine from meate as much as be possibly can :comforting bimfelfe with the affurance of health if he to.

And for as much all , as the body which is walted and emptied, not enely with hunger, but also with sweat, and being a long time, as a dead body through the griefe and behemency of this disease, will in a short time come to god

appetite againe.

Pozeover it is further to be confidered. that after he is cured of this malady, it is not necessarie that he go into any open appe presently: but what he both must be by digres, (Viz.) first to goe from his owne chamber into an other, and so abroad into the house, and then to his neighbours house, and so by little and little, for a certaine space.

But if he do wel, he must not make any lubbaine chaunge.
All which thinges here before mentioned, if they be duely
Do. 3 oblerued

French Pox.

observed (as they ought to be, he shall be safe and sound so; ever after, if he doe not mil-governe hunselse againe.

The manner of dyetto be observed during the continuance of the cure of this disease.

Dere are many things to be confecret of, for p ordring of a man , as touching his over whilf he is in this bi-Areffe : for fome men are of opinion the beff ovet to to eate nothing but bread with a few Rayfons of p Sunne: Withich bread muft not be aboue 4. 63 waight, eit muft be cleane mithout Balt, oz ether fauce : Dther fome are of omnten . that it is belt to; the ficke person to abstaine from all man. mer of meate generally: creent a little both made of achicks en to moillen bis bread withall, and the fame not to be taken about once in a bay: #62 it is not fit that he baue any thing towards night, but onely a few Raylons of the Sunne, and an os. of bread. 3 my felfe am of that spinion . that if he baue bi. a Chickin that is young and tender once a dar. with his bread it is not amile, or if the Chickin be any thing grown, the a quarter of it is inough, but the Chicke muft be lobbe in bery cleane water, e nepther falt noz fauce muft be pled thereinith, but one ly a little Suger. And be muff take bebe, that buring the time be is in cure be boe not fo much as tall of any falt, and he mult have White Bread made for that purpole feafoned with Suger, (inbich is beff for him) Alfo if there be a little Burrage put into bis broath, or elle the leanes of Burrage, it willthe better foz him.

And for his drinke, there can be none better in mine opinion, the ferond water, or bectoion of Guaicum, which is in

the laft chapter befoge rebearled.

Likewise the patient (during all the time of his cure) must for beare all busines and put away all saveres & thoughts, for through them there may happen many improduents, for his cure, such is the nature of that disease, and he must audite

anoive all confultation and Audies: So that he may be free from all motions and workings he must not be melancholy. And he must between of anger and heavines of mind if he have any faill in musicke, it were not a miste, to fuster him to practice the lame, but not overmuch, whereby he might formewhat drive away melancholines and mitigate the conditations of his thoughts.

Of he be in a place where he may here the noise of singers and minstrels, if he have no skill in musique himselfe, of where he may give himselfe to some sports, pastimes and musicaue as aloresaid, and sometimes to delight himselfe with some mercy talks or testes, but in any wife to elshew the company of women. And let his head be often rubbed with a warme cloath, and combed with an Audrie combe.

Laftly, this complexinen ought principally to be regarbed, leaft that any thing flould be minificed unto him that is of a vzy and hot complexion, as unto him that is a colde and moiff complexion, or the things that are of one qualitie, thou is be minifixed unto fuch as be both extreames, and thereby great have might enfue to the ficke person, by the ourlight, or negligence thereof,
